Which Shaft Drive?

This is the biggest, most vital question every purchaser of an electric vehicle must answer. On the choice depends the efficiency of your car.

Three years ago chain driven cars had some standing.

But the Baker shaft drive was quietly, steadily, irresistibly, demonstrating superiority.

Recent developments prove that the very manufacturers who were most bitter in their attacks upon the shaft drive were at the time themselves experimenting with it.

The truth is, the Baker has revolutionized electric vehicle design.

Manufacturers were forced to face the facts. Baker superiority compelled them to resort to some form of shaft drive.

But the Baker shaft drive is protected by patents.

Other manufacturers have had to be content, therefore, with approximating the Baker. Their "experiments" are not to be compared with the time-tried and road tested transmission of the Baker—in actual service during the past two years in over 2000 cars. The Baker—"The Pioneer of Shaft-Driven Electrics"—has proved itself first in efficiency—highest in mileage—lowest in upkeep—and longest-lived.

A demonstration will satisfy you that the Baker is the car you want. The more you know about electrics—the better you like the Baker.
